

# Project Outline

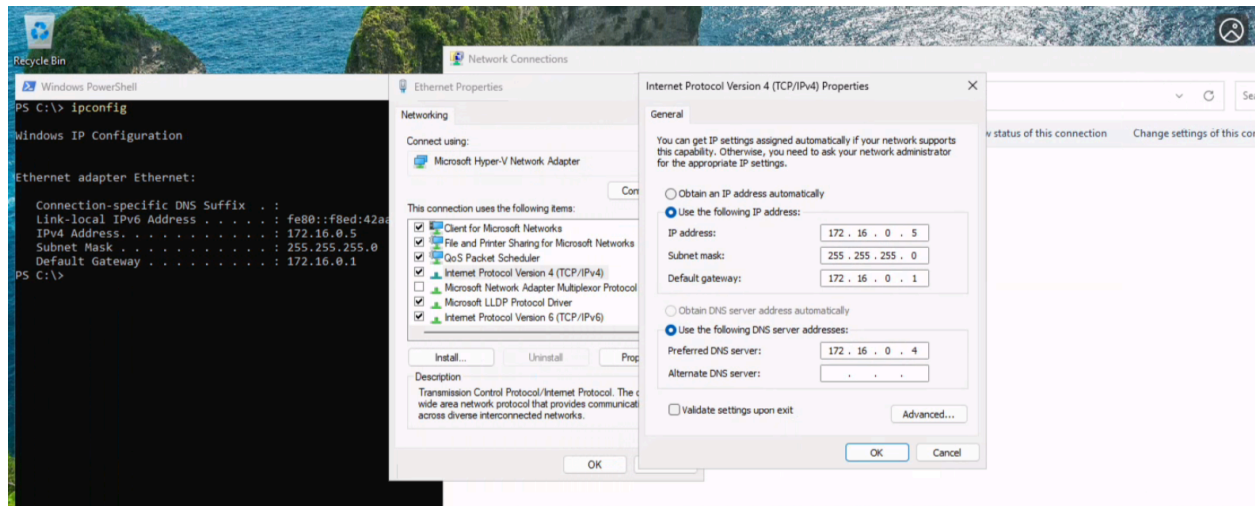

Created 2 VMs in Azure, making sure both are present in the same subnet

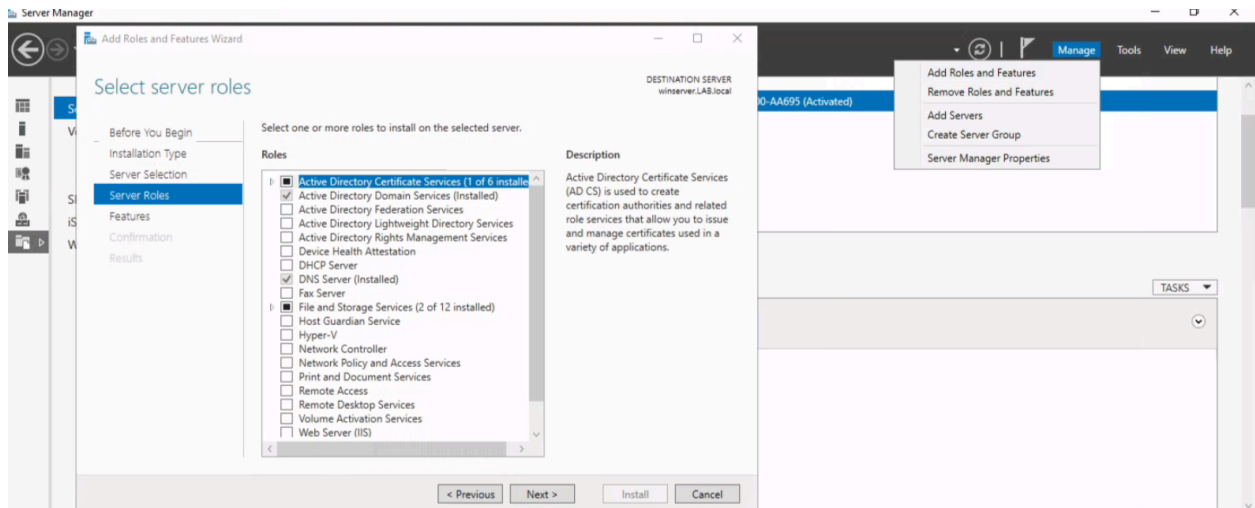

Network configuration on Windows server, to assign it a static IP

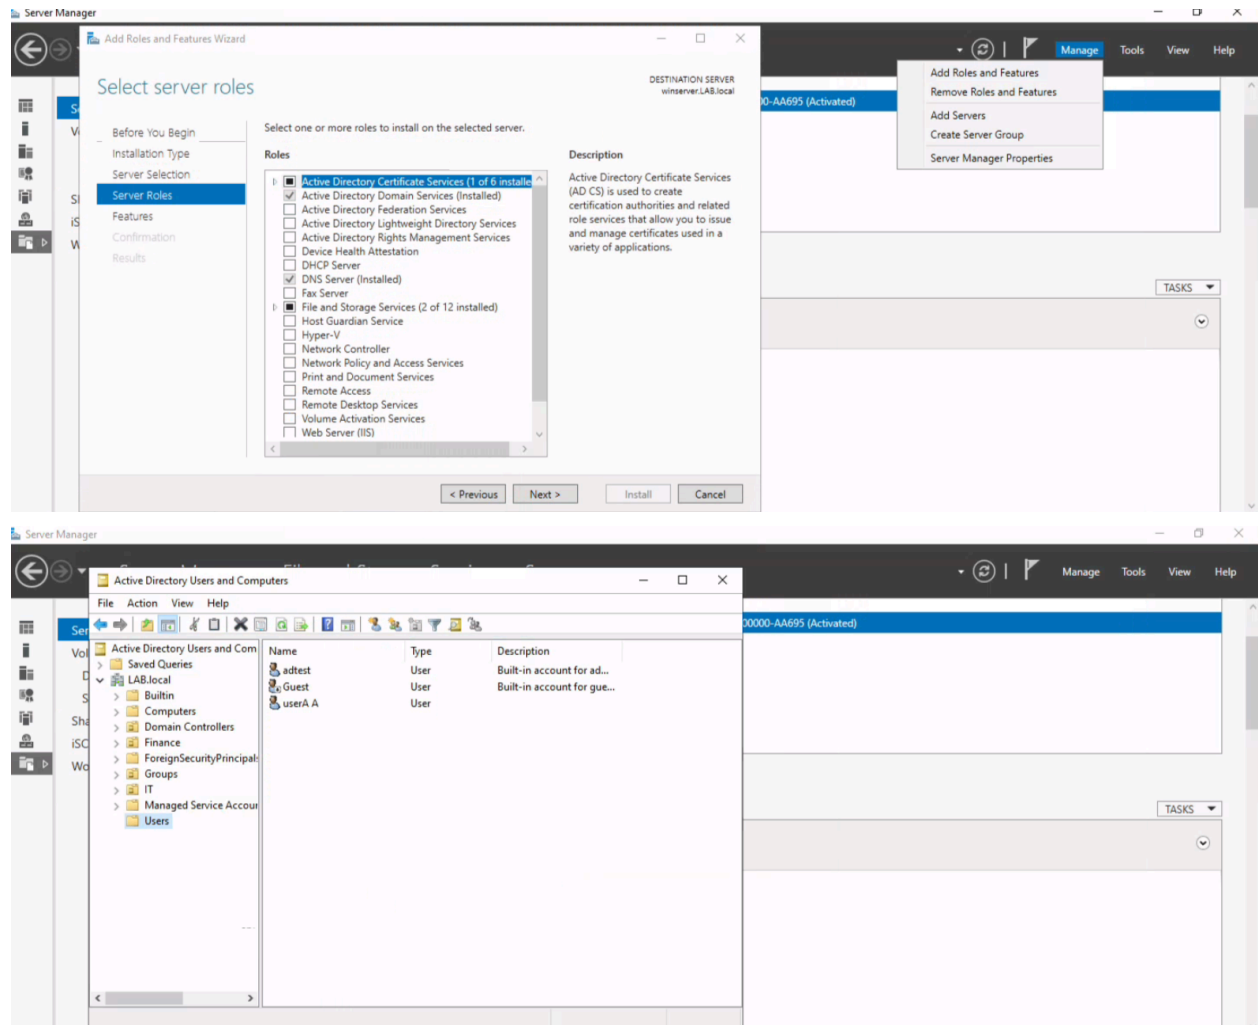

## Network Configuration on Client VM, to assign a static IP and to direct DNS requests to Windows server

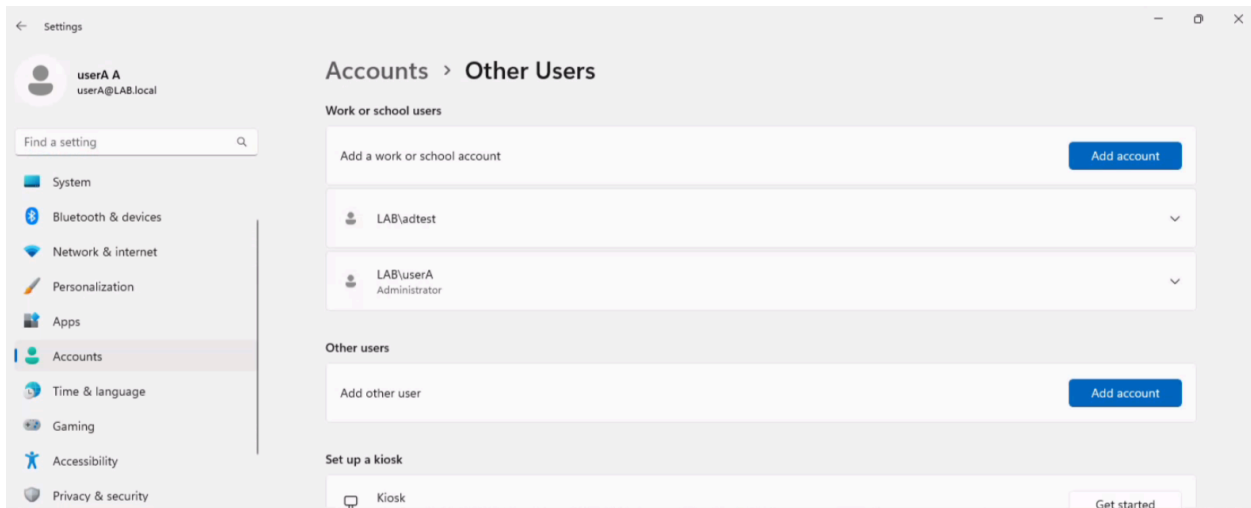

## Set up the Windows server to install Active Directory Services

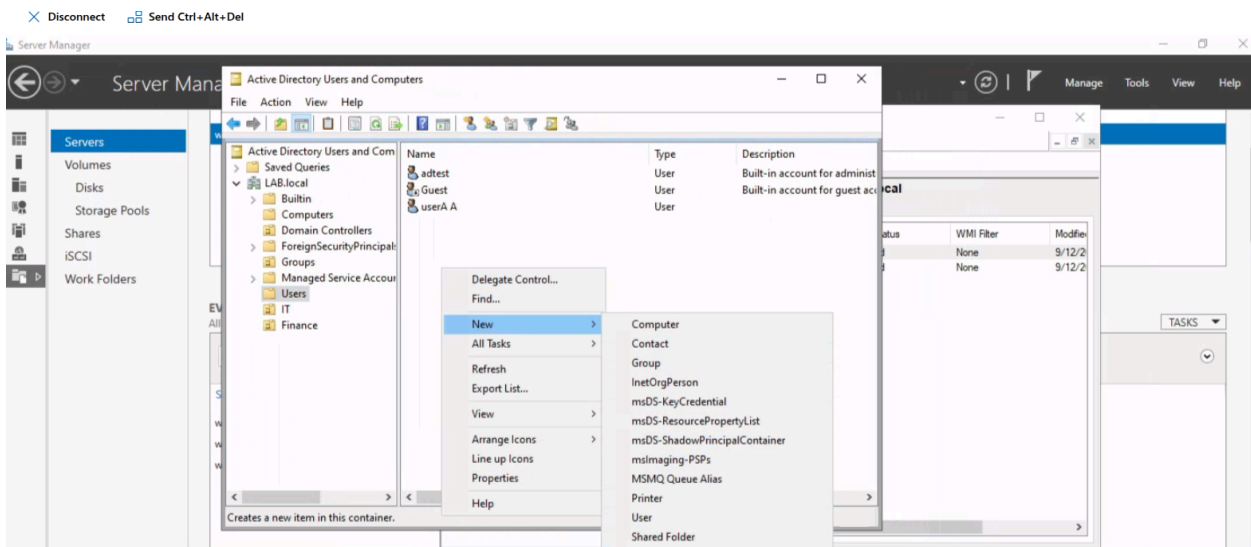

Click on tools to get Active Directory user and computer

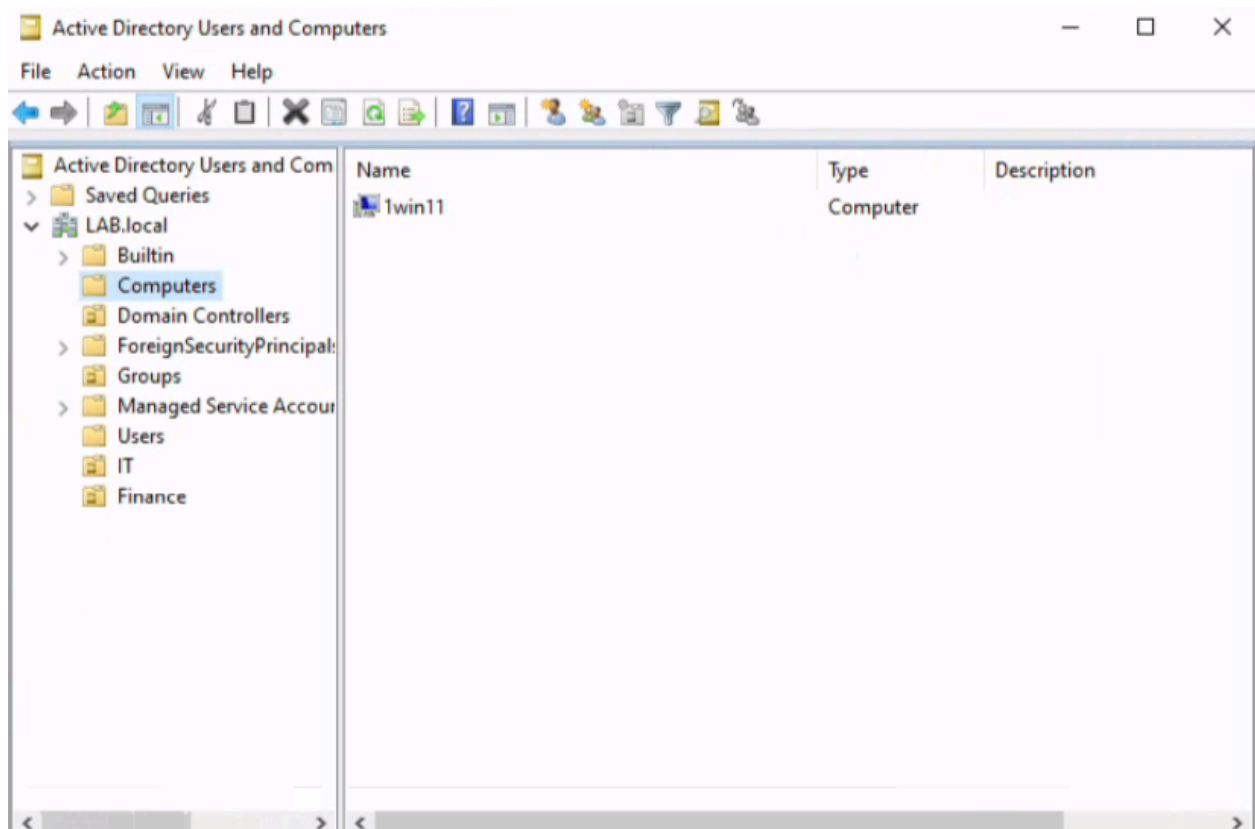

On the client computer, you'll add a work or school account and link with AD domain:

Ability to add new users, groups and Organisational units

To check that the client computer is connected to the Domain Controller:

Password policy configuration:
